

- To stop the cruise control you can
- Press the Green Button (again)
- Twist the throttle
- Apply the brakes

PAS

The bike has PAS technology which is able to detect when you pedal and automatically give power without the use of the throttle.

By default this function is disabled
PAS 0

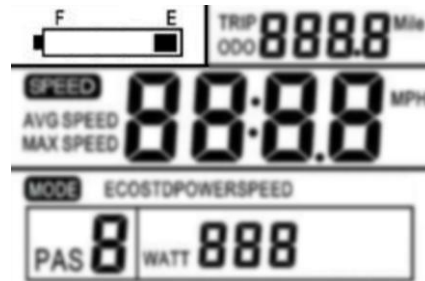

To enable this function use the **↑** and **↓** buttons to select one of the 5 modes
OFF, ECO, STD, POWER, SPEED

Please Note
Throttle will override the PAS

Example
If you are pedaling with the PAS system enabled and want to faster, simply twist the throttle.

Battery Indicator

When the display shows **one** bar the battery is nearly empty you will feel a gradual decline in power.

When the battery is depleted the motor will be disabled while the LCD and Lights will continue to function.

BIKES

E-Bike Functions

Before you power on the bike

Make sure the battery is secured.
Check the key is in the locked position or the Velcro straps are securely fastened

Please note that your E-Bike can be ridden like a regular bicycle (without the use of power)

To turn the bike on
Hold the 'MODE' button

You will notice that the both the Front and Rear lights will automatically be working when the bike is powered

Hold **↑** If you wish to turn the Lights OFF

There are two ways to receive power from the motor

- 1) Throttle
- 2) Pedal Assist Sensor

Throttle

The throttle has two function

Twist & Go

At any time you can twist the throttle to control the speed of the bike

Cruise control

Pressing the **GREEN** button will copy the throttles speed

Example
Pressing the green button when the throttle is half turned will lock the bike to half speed
